

Recalibrating Visual GEO: An Anchor-Decoupled Evaluation Protocol and a Cross-Encoder Transfer Probe on ESCI

1 STAGE 1 (Pre-loop setup)

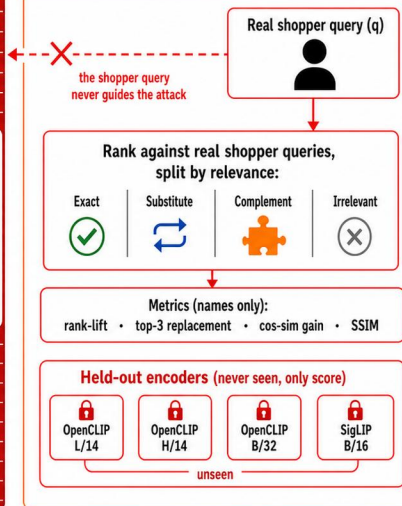

2 STAGE 2 (Optimization loop, repeat K=200)

Anchor-Query Firewall: the query never enters the attack

3 STAGE 3 (Held-out evaluation)

Stage 1 (Setup): build the anchor from the product only

Stage 2 (Optimization): craft an adversarial product image

Stage 3 (Evaluation): test on real shopper queries (white-box same-encoder + held-out encoders)

= frozen (encoder not updated)

= unseen (held-out encoders)

= blocked (query never enters)
