

Pre-flight no-op gate. Require $\overline{\cos}_{\ell=E} - \overline{\cos}_{\ell=I} \geq 0.05$ on the original corpus, otherwise swap CLIP backbone.

SELLER-SIDE (optimization, anchor only)

Four-way attack pipeline · $\varepsilon = 16/255$

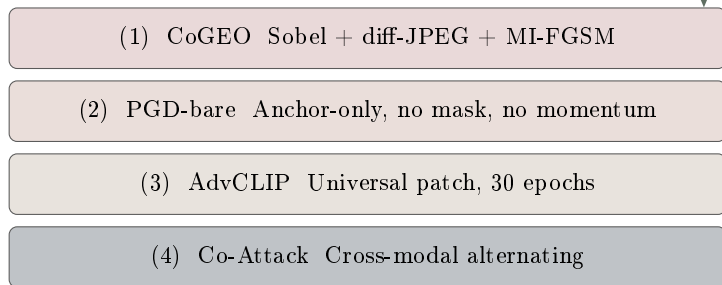

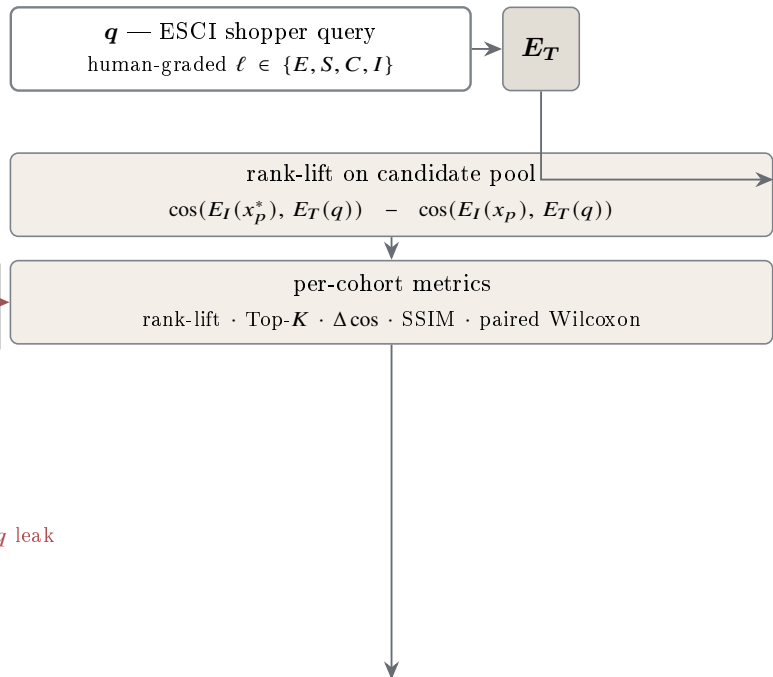

image only, no q leak

REVIEWER-SIDE (held-out evaluation)

Aggregate + per-cohort report → C1 (per-image gradient dominates) · C2 (cohort heterogeneity) · C3 (stealth-lift trade-off across families)
